

Sustainability

Sustainability is at the core of MQP's strategy. Specifically we will minimise the impact we have on our environment by putting the development of sustainable solutions at the heart of all our business decisions.

To do this we concentrate on 3 key areas;

Sustainable Environment

"We will minimise our impact on the environment by responsible management of all our business activities."

- Protect our environment from operational impacts by operating a Certified Environmental Management Systems at all sites
- Preserve and where possible enhance habitats and wildlife for the future.
- Promote biodiversity and respect Sites of Special Scientific Interest (SSSI's)
- Manage our waste responsibly.

Sustainable Communities

"We will support our local communities and create a workplace where employees are valued and engaged."

- Ensure all employees and stakeholders are protected from occupational risks by promoting our Health & Safety policy of 'Zero Harm'.
- Support, develop and retain our employees through recognised training programmes to achieve excellent levels of competence.
- Manage the impact on our neighbours by engaging, respecting and understanding their needs.
- Communicate widely with all stakeholders and support the local communities, involving them in our business where we can.
- Improve our business performance through the development of sustainable practices giving our shareholders greater value.

Sustainable Production

"We will achieve more with less through reducing the use of energy, and other resources."

- Manage our natural resources responsibly promoting the policy of 'Reduce, Re-use, and Recycle'
- Reduce our use of energy and hence emissions of green house gases in all our business activities.
- Develop new products/facilities to continuously reduce the amount of energy we use and hence the carbon footprint of our business and that of our customers.
