MaxiPhalt

Focusing On Service and Quality

MaxiPhalt has been designed to provide a single course application layer which is ideally suited for rural roads. MaxiPhalt is ideal for use in a wide variety of applications.

Benefits of MaxiPhalt

MaxiPhalt is a single course layer ideal for county roads where a low textured, flexible and deformation resistant material is required.

Benefits include:

- Increased fatigue resistance to improve durability.
- Improved deformation resistance to reduce the effect of wheel rutting.
- Design gives a dense, low textured, durable finish which reduces water ingress.
- Laid using conventional paving equipment in accordance with BS 594987.
- All in one binder and surface course layer laid in a single visit to reduce the installation process.
- Can be laid from 40 mm to 120 mm in a single course.

Available in the following nominal sizes:

- 20 mm
- 14 mm

Advantages

Advantages of MaxiPhalt

- **Dual layer, single visit application**
- **Increased fatigue resistance**
- **Improved deformation resistance**
- **Reduced water ingress**
- **Increased productivity**
- **Reduce gang costs**
- **Reduced traffic management**
