MaxiDrive

Focusing On Service and Quality

MaxiDrive has been designed to satisfy the increasing demands being placed on domestic driveways by changing climatic conditions and power steering.

Benefits of MaxiDrive

MaxiDrive utilises a hard wearing aggregate and a modifier to withstand increases in temperature and have a greater resistance to the action of power steering.

Benefits include:

- Improved workability to enable a better finish through improved compaction, especially in tight hand laying areas.

- Improved resistance to vehicles power steering compared to conventional materials.
- Less sensitive to increased temperatures which will lead to reduced fretting, marking and softening.
- Laid using conventional paving equipment in accordance with BS 594987.

Available in the following nominal sizes:

- 10 mm
- 6 mm

The contractor must ensure full compaction is achieved whilst the material is still within the laying and compaction temperatures, to derive maximum benefit.

Advantages

Advantages of MaxiDrive

- **Improved workability**
- **Greater resistance to scuffing from vehicles with power steering**
- **Tighter surface finish**
- **Less sensitive to increased temperatures**
- **Greater resistance to deformation**

For further information on this and our full range of products please contact the Sales Office on **T 01530 832244** or Technical on **T 01530**
