MaxiDrive+

Focusing On Service and Quality

MaxiDrive+ has been designed to satisfy the increasing demands being placed on domestic driveways, commercial and industrial sites.

Benefits of MaxiDrive+

MaxiDrive+ utilises a combination of Stone Mastic Asphalt and a modifier to withstand increases in climatic conditions and has a greater resistance to the impact from commercial and industrial traffic.

Benefits include:

- Improved workability to enable a better finish through improved compaction, especially in restricted laying areas.
- Consistent Mixture.
- Improved resistance to heavy goods and commercial vehicle movements.
- Less sensitive to increased ambient temperatures which will lead to reduced fretting, marking and softening.
- The same end durability is achieved to that of an asphalt mixture using a harder paving grade bitumen.
- Laid using conventional paving equipment in accordance with BS 594987.

Available in the following nominal sizes:

- 10 mm
- 6 mm

Advantages

Advantages of MaxiDrive+

- **Improved workability**
- **Enhanced resistance to heavy goods and commercial vehicle movements**
- **Less sensitive to increased temperatures**
